I have recently finished my Level 3 BTEC Computer Science course at Bedford College and I'm looking to develop my skills within this field. I believe an apprenticeship will give me the opportunity to develop my skills both in my career, as well as my interpersonal skills by working as a team on various projects.

I am a dedicated individual who has very high aspirations. I have often been described as a strong-willed individual combined with my reliability, honesty, and patience that allows me to integrate well into any team. Furthermore, I enjoy personal development and upon speaking to my managers I have been told I have a very 'executive' personality. This means my main weakness is that I am uncomfortable with unconventional situations. I like following particular procedures as I'm used to following a methodical approach. I believe an apprenticeship opportunity will allow me to overcome this solution and utilise my more creative problem-solver mindset which I tend to employ outside of work.

Outside of college and the workplace I'd describe myself to be a creative and innovative character. My interest lies in content creation and graphic designing and I worked on a few projects as a junior digital marketer, by creating a prototype on 'Figma' to create an application which I'm working on for my community, and it is currently in the development stage. Likewise, I had the opportunity to be part of my local community to create content such as; 'posters' using 'Adobe Photoshop' to display some of the activities the local community will be doing.

Furthermore, I like developing my knowledge around 'software engineering' by practising code weekly, enrolling on courses such as CISCO NETACAD, immersive lab, Google UX Design Certificate and experience with C#; I am also in the process of developing a website for a small-local business.

Asides from studies I enjoy physical activities by doing various sports such as combat sports as a form of self- defence and swimming to keep fit. I have had different work experience from working in retail and knowing the logistics of working within a warehouse.

Overall, my ambitions in the future is to develop my IT skills and gain more experience within a firm, especially to develop interpersonal skills, which will help with liaising with stakeholders to ultimately attain business success.

Sincerely,
Imtiyaz Khan

I would like to learn more about hardware and software repairs which I believe that working within a workshop facility would be able to provide me with the appropriate knowledge and training that is required. This is something that I haven't been exposed to before but most certainly is a skill that I wish to retain . The apprenticeship would help me largely build the foundations of a career within technology and I believe that working alongside others within the team and assisting the Technical team with maintenance tasks would also help me as I would be able to learn from the rest of the team as well as network during this apprenticeship. Furthermore, a strength that I wish to improve on more would be my team work within a IT based environment as I can imagine this setting would be very different from a sports field. Therefore, I feel like during this apprenticeship I would be able to gain more experience within a work based professional environment.
